

Healthcare GenAI Security
[ChatDashboardAdmin](#)

Healthcare GenAISecurity-First

A comprehensive demonstration of how GenAI applications can be properly secured following industry best practices and OWASP Top 10 for LLM Applications 2025.

[Try the ChatView Dashboard](#)

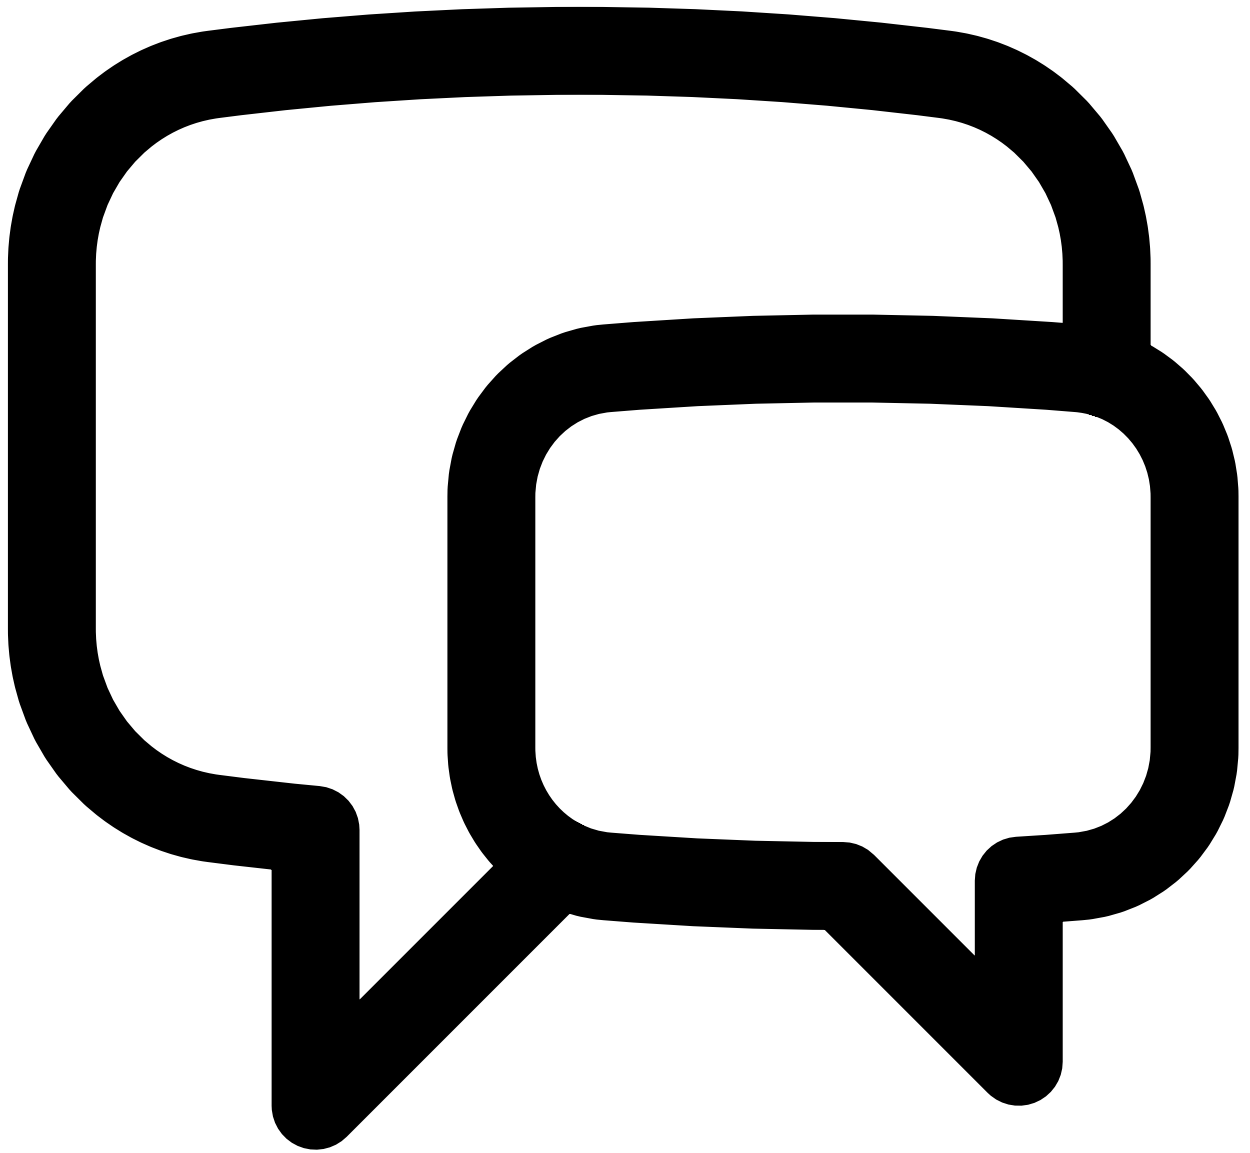

Security Features

Comprehensive security implementation covering all major threat vectors

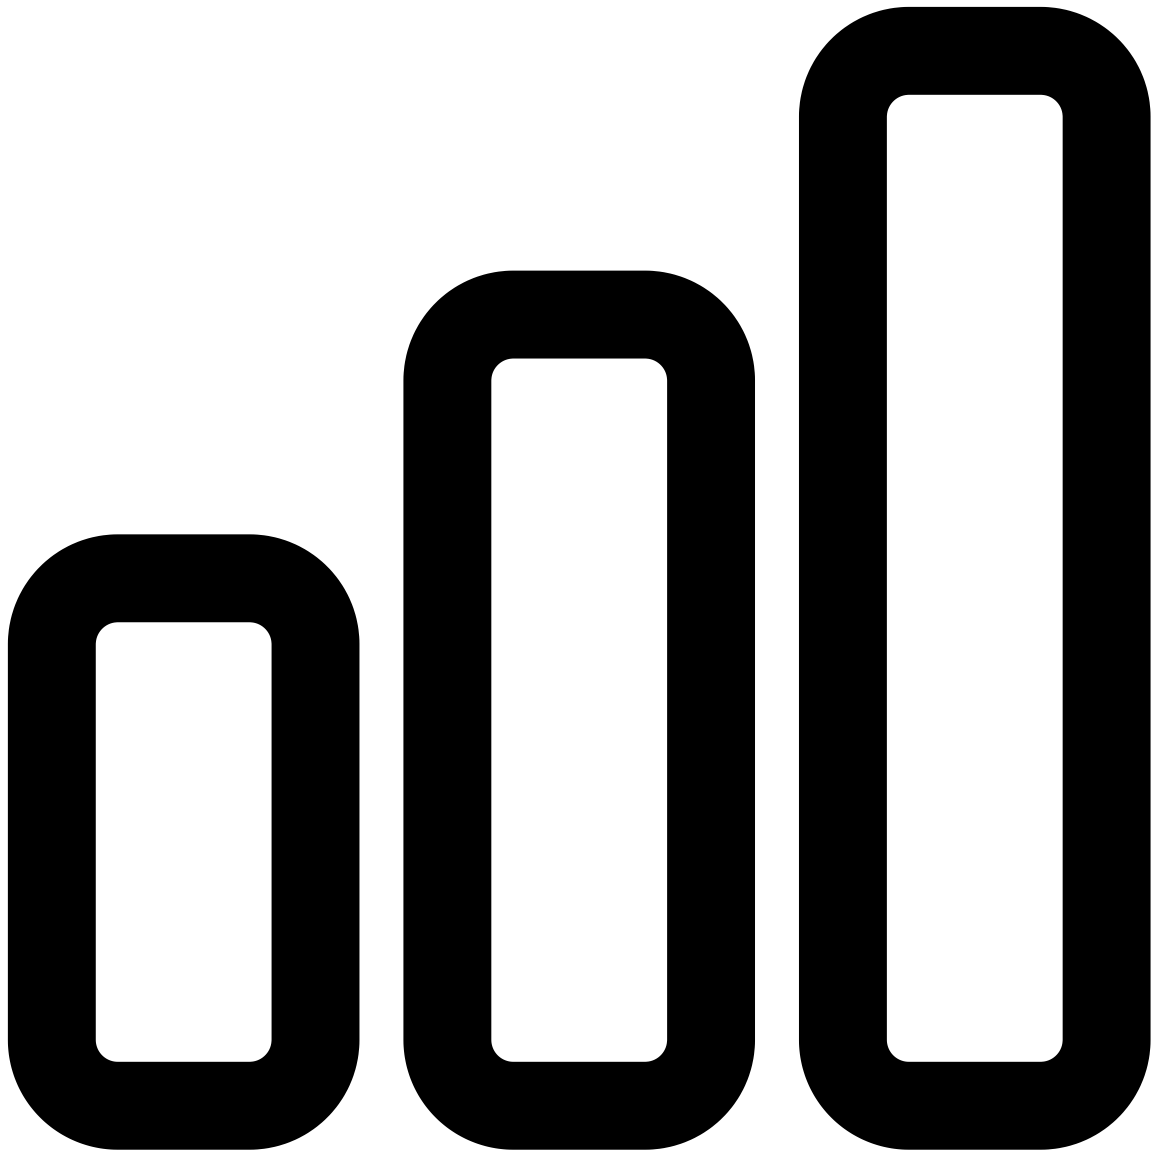

OWASP Top 10 Compliance

Full implementation of OWASP Top 10 for LLM Applications 2025

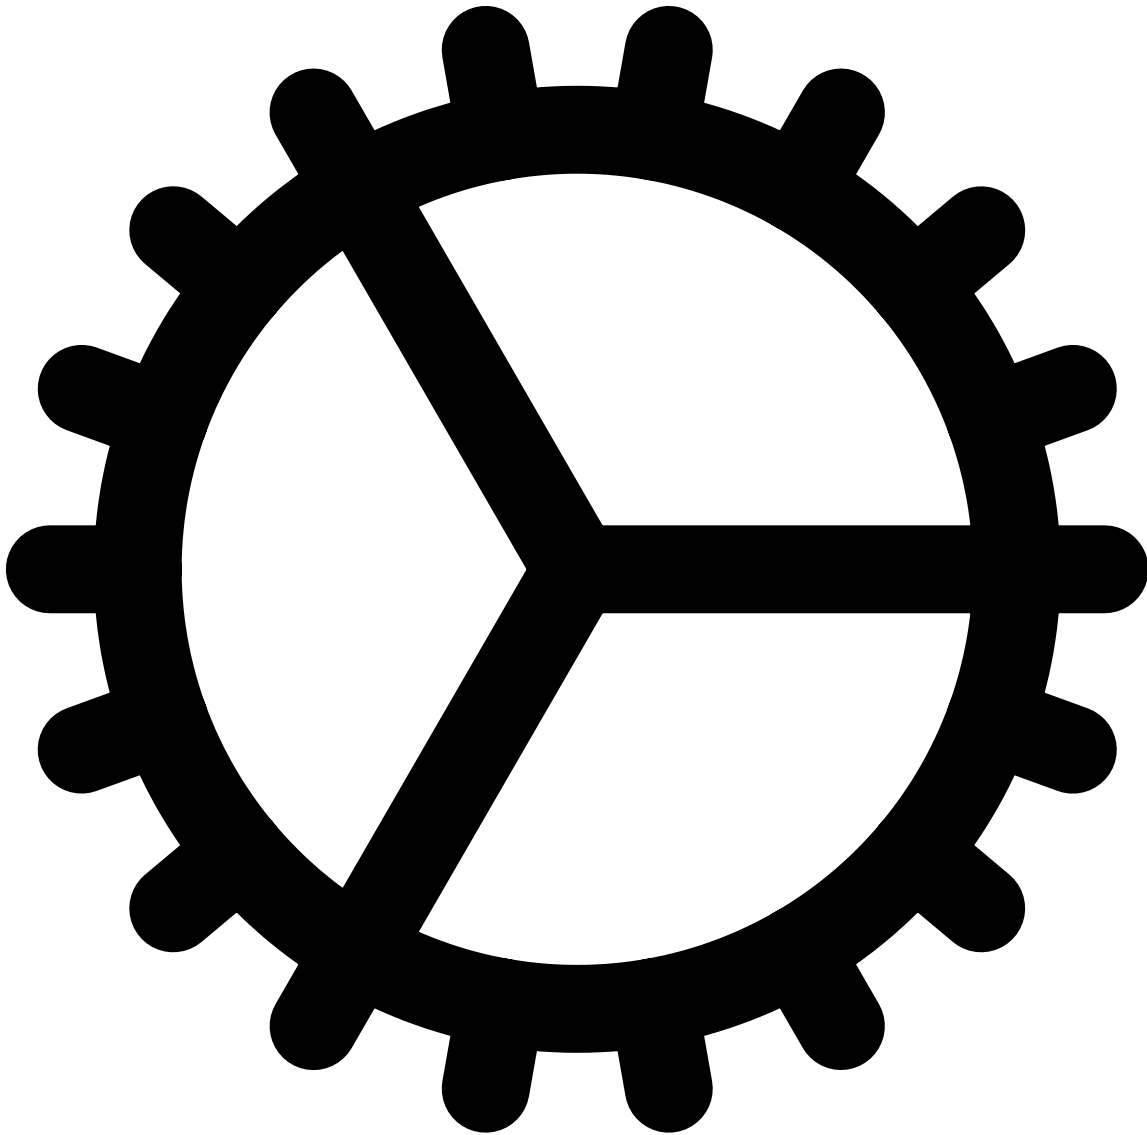

Secure Healthcare AI

AI-powered healthcare assistant with comprehensive security measures

Real-time Monitoring

Live security dashboard with threat detection and analytics

Role-Based Access Control

Advanced RBAC system with fine-grained permissions

OWASP Top 10 for LLM Applications 2025

Complete coverage of all security requirements

LLM01: Prompt Injection

Input validation and filtering

✅ Implemented

LLM02: Sensitive Information Disclosure

Data sanitization and PII detection

✓ Implemented

LLM03: Supply Chain

Secure dependencies and model sourcing

✓ Implemented

LLM05: Improper Output Handling

Output validation and encoding

✓ Implemented

LLM06: Excessive Agency

Least privilege access control

✓ Implemented

LLM07: System Prompt Leakage

Secure prompt management

✓ Implemented

LLM08: Vector and Embedding Weaknesses

RAG security measures

✓ Implemented

LLM09: Misinformation

Output verification and disclaimers

✓ Implemented

LLM10: Unbounded Consumption

Rate limiting and resource management

✓ Implemented

Security Showcase

Interactive demonstrations of security features

Threat Detection Demo

See real-time prompt injection blocking and malicious input detection in action.

[Try Demo →](#)

Data Protection Demo

Witness PII masking and sensitive data anonymization in real-time.

[Try Demo →](#)

Access Control Demo

Experience role-based permission enforcement and security controls.
